

Aerial Lift Training Hamilton

Aerial Lift Training Hamilton - The mechanized access platform referred to as an aerial work platform is a device which provides access to places which are otherwise inaccessible to people and other equipment. Also known as an elevating work platform or aerial device, the machine is usually used to access high areas. Maintenance and construction workers usually have to utilize aerial work platforms on the job. Firefighters utilize them for emergency access.

Designed for temporary use, aerial work platforms are different from elevators, that provide permanent access to high places. An aerial work platform is designed to be operated by one individual, and can lift weights of not more than one ton. Various types have higher load limits. There are a variety of kinds of aerial work platforms; like for instance, there is a "cherry picker" and a "scissor lift".

Some aerial work platforms come equipped with electrical outlets or compressed air connectors for power tools. For specialist tasks, like lifting frames for window glass, an aerial work platform may come along with special tools.

Anybody required to operate an aerial lifting machinery needs training, together with their superiors. Members of Health & Safety Committees and representatives responsible for inspecting aerial device work areas also must undergo training. Individuals training would know how to use an aerial lift machine. They would likewise gain an understanding of the regulations which apply to the safe operation of these machines. Rules vary in various provinces, and in worksites which are federally regulated.

Anybody who is needed to be lifted by or work near an aerial lifting machine must be told about potential hazards. An Aerial Lift Training Video can be shown in a general safety session to educate all of the employees who are lifted by them or work near them.

Aerial Lift Training Program includes modules focused on the following: Hazard Identification; Aerial Lift Devices and Operating Controls; Platform Positioning & Park Positioning and Pre Operational Checks for Aerial Lift Devices. The program is designed to train workers on the safe use of self-propelled, elevated work platforms and self-propelled, boom supported, elevated work platforms. A certificate will be provided to employees who complete the program, signed by a qualified individual to confirm successfully completing a hands-on practical evaluation.
